

Below is an example of the Boston Squares method diagram, as presented in the Iraq Hydrocarbon Potential Report. Field names and reserve figures have been removed for all but one field in this example. The full diagram is available in the body of the Report.

In this way, fields within each category have been compared. Categories are based on hydrocarbon content, basin and production status, as in the report contents (e.g. producing oil fields in the Mesopotamian Basin, non-producing fields in the Mesopotamian basin, prospects in the Mesopotamian Basin and so on).
